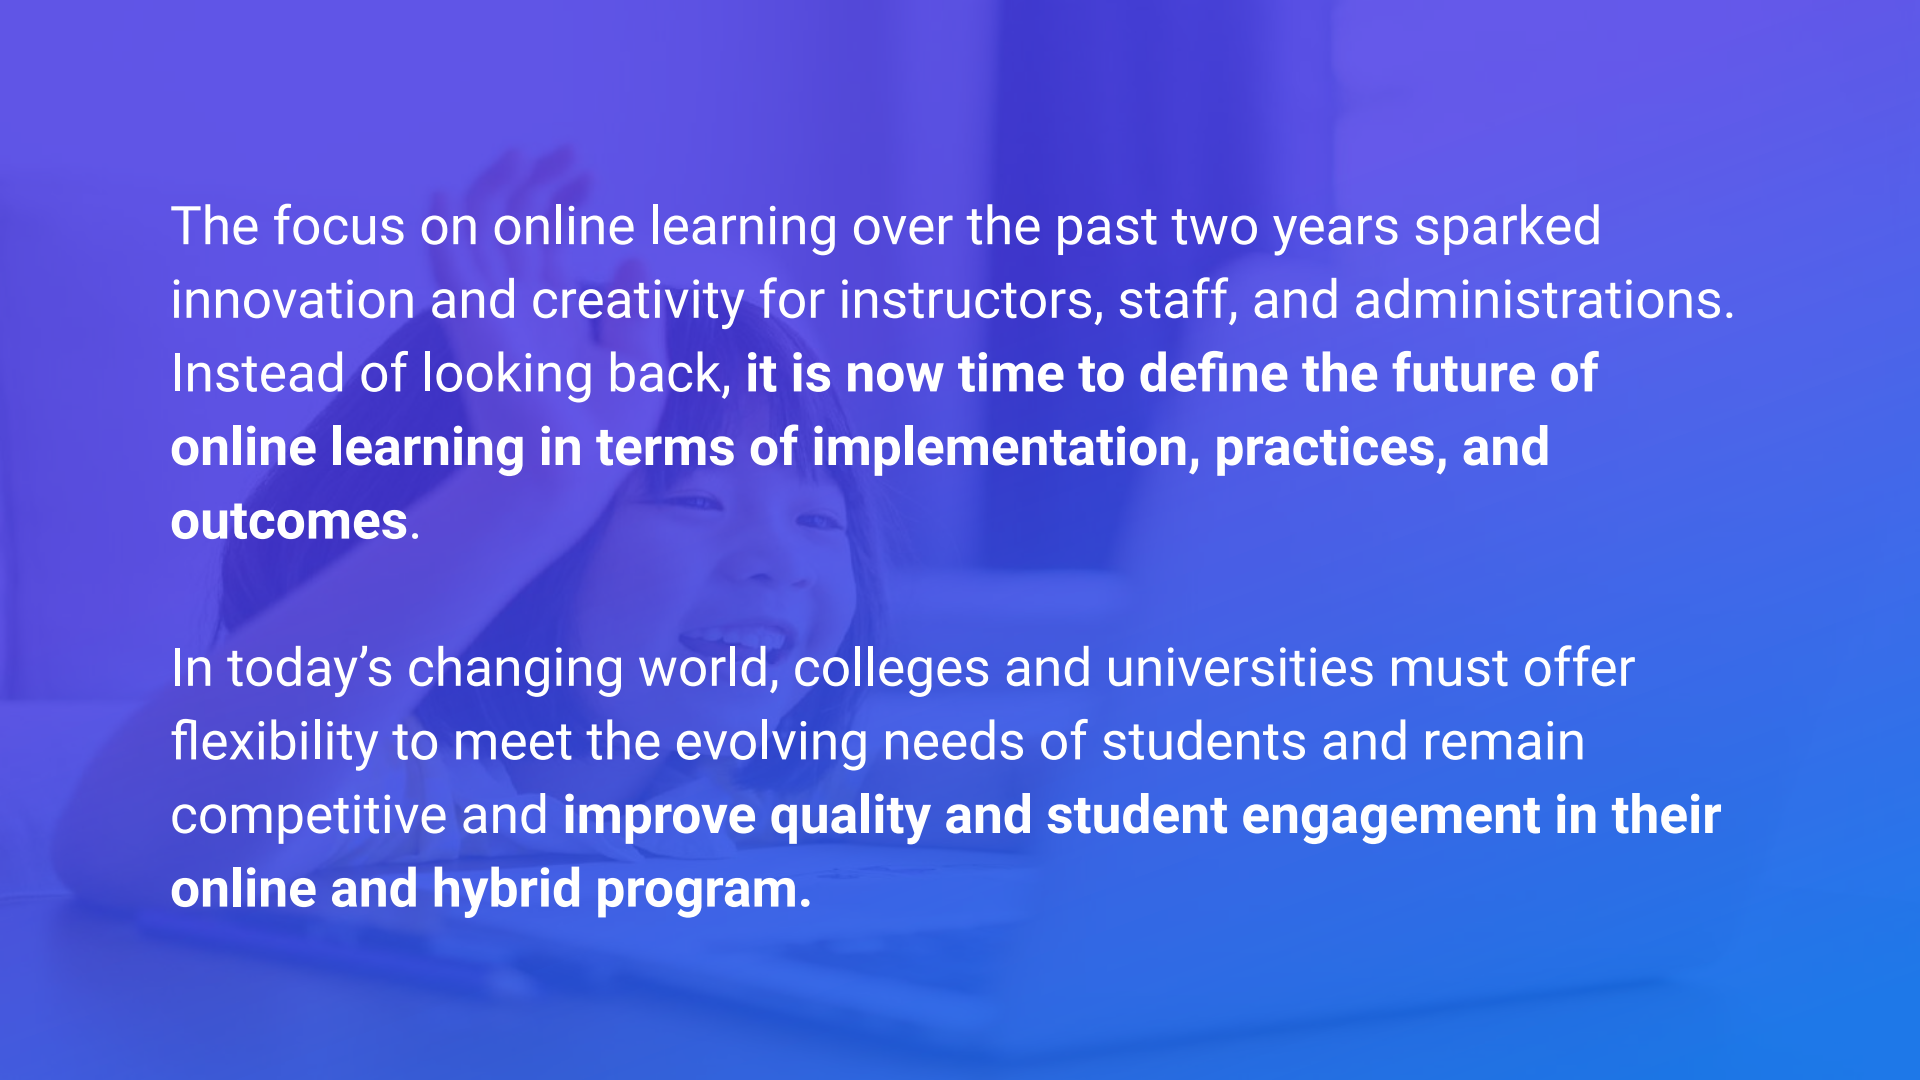
The Online Classroom Changing Higher Education

Improve the online experience for Learners and faculty with a video conferencing platform designed for Education

Class Technologies

Learn more at **class.com**



The focus on online learning over the past two years sparked innovation and creativity for instructors, staff, and administrations. Instead of looking back, **it is now time to define the future of online learning in terms of implementation, practices, and outcomes**.

In today's changing world, colleges and universities must offer flexibility to meet the evolving needs of students and remain competitive and **improve quality and student engagement in their online and hybrid program.**

Post-COVID Expectations

Looking ahead, institutions will take advantage of online synchronous learning to provide:

FLEXIBLE options for faculty & learners

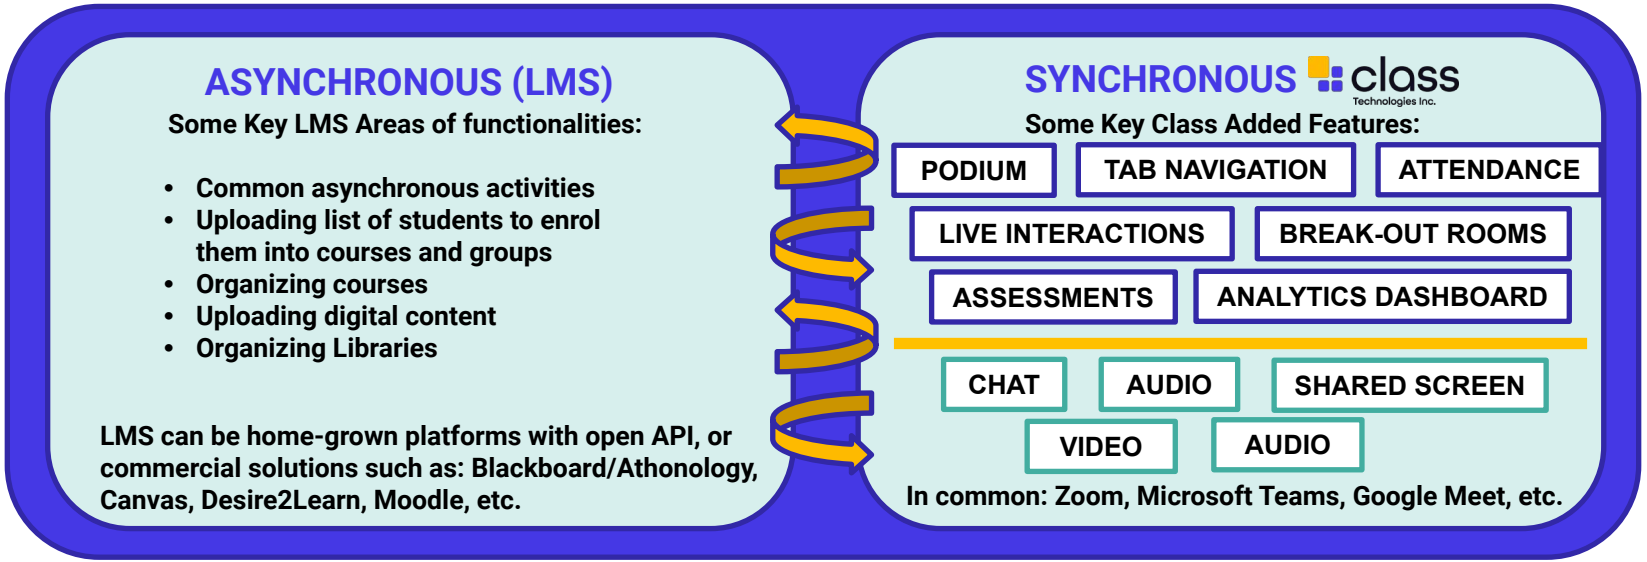
ACCESS to quality education, anywhere

INNOVATIVE workforce preparation

An integrated, end-to-end digital learning environment for Education

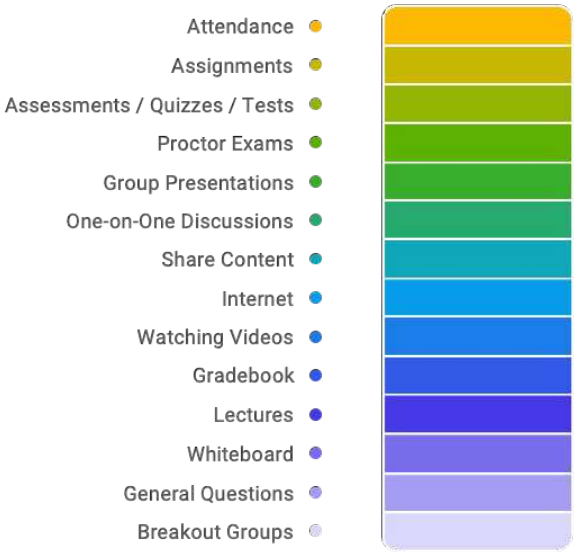
At Class, we believe that socially-constructed learning–with the teacher as both a facilitator and learning coach–is the approach needed to improve student outcomes in a flexible learning environment.

A synchronous learning platform is instrumental to automate tasks–like attendance and grading– while also bringing essential collaboration tools to increase student engagement and foster an environment of equity and opportunity. **Class is the solution for all synchronous communication and collaboration tools required in Education and can be integrated with à supported LMS system to allow for *single sign-on* into courses and sessions.**

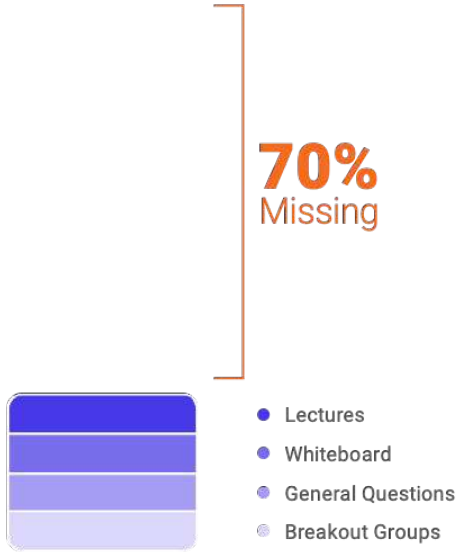


Gaps in the Virtual Classroom Environment

What instructors do in a physical classroom:



What instructors do in a virtual classroom today:



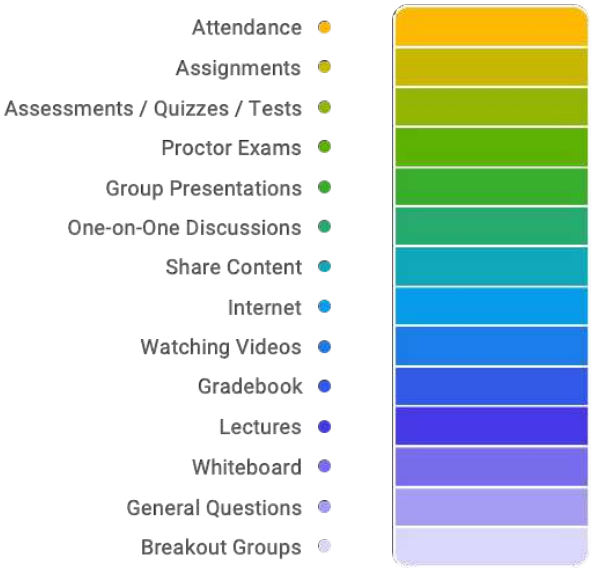
TRADITIONAL VIRTUAL CLASSROOMS

What many students and educators have come to find is that the typical virtual classroom offering falls short in several key ways:

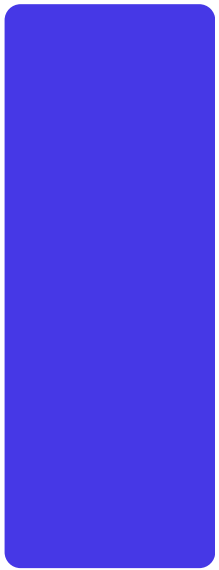
- **Many virtual classrooms struggle with transitions between instruction and content**, which means students must leave the platform to access multiple additional apps and sites, often breaking the span of students' attention.
- **Universities often rely on asynchronous learning programs**, reducing opportunities for students to collaborate, engage with peers, and learn through shared experience–which has long shown to improve knowledge retention.
- **Teachers have limited opportunities to meaningfully engage students**, as cameras and audio are inconsistently used and enforced.

Class = A Live Learning Environment

What instructors do in a physical classroom:



What class Technologies Inc. lets instructors do in its live learning environment:



- Attendance
- Assignments
- Assessments / Quizzes / Tests
- Group Presentations
- One-on-One Discussions
- Internet
- Watching Videos
- Gradebook
- Lectures
- Whiteboard
- General Questions
- Breakout Groups

And MORE...

INTRODUCING CLASS

Teachers are using Class to talk one-on-one with students, simplify attendance, grade assignments, and more.

Class is a comprehensive virtual classroom platform for SYNCHRONOUS communication and collaboration.

Class can be integrated through a LTI protocol or API architecture with the **ASYNCHRONOUS platform used as Learning Management System (LMS)**, in order to build an end-to-end education technology solution to support the delivery of pedagogical model to enrich the teaching and learning environment **to drive student's engagement and success!**

class

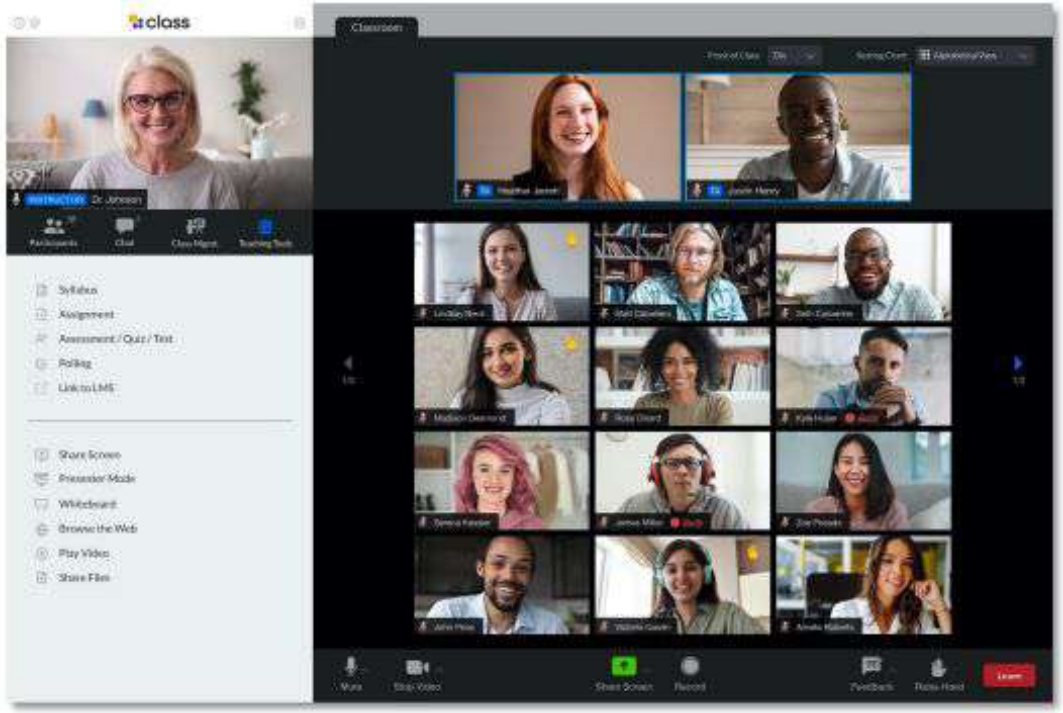
A virtual classroom designed and built for Education

About Class Unique Value Prop:
Improve Instruction

With Class, you have access to tools that help you teach the way you would in a physical classroom, enabling even online exam sessions.

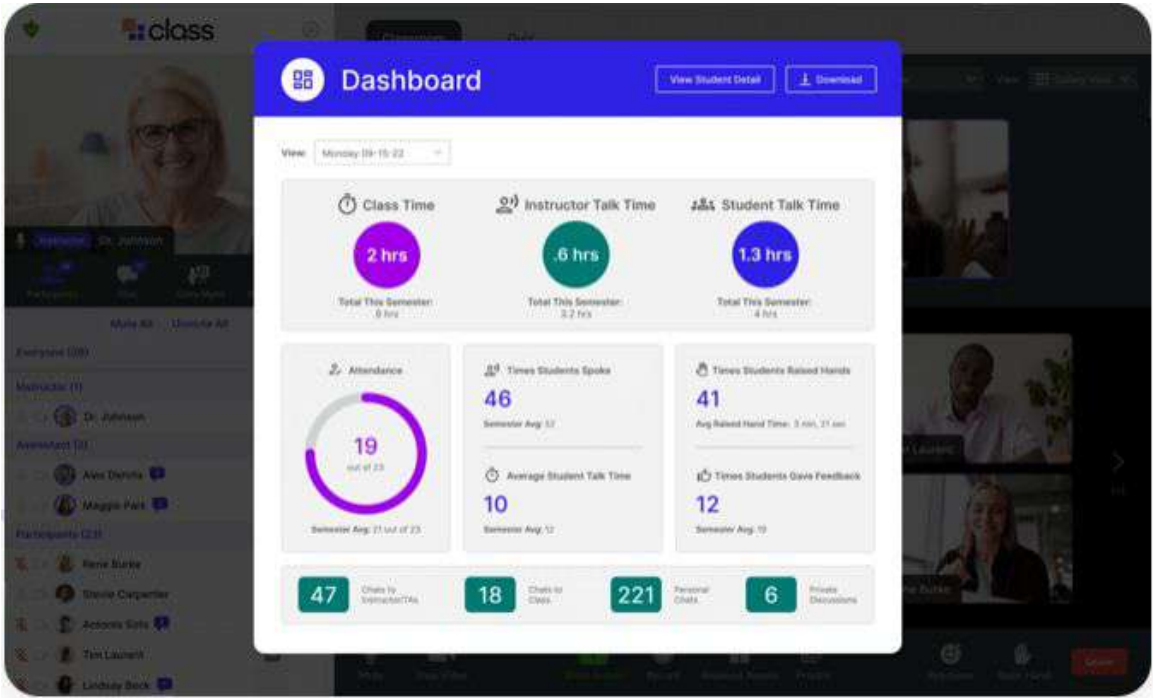
About Class Unique Value Prop:
Measure Contribution

Class allows you to deliver engaging lectures and a connected learning experience for learners in the virtual classroom.



About Class Unique Value Prop:
Analytics for Synchronous Activities

Class allows you to monitor participation, including contribution and speaking time, across groups or by individual student.



The Class Difference

- Intuitive and user-friendly platform
- Cutting-edge collaboration tools: interactive whiteboard, breakout rooms, integrated chat, and video conferencing
- Enhanced learning opportunities: live polling, multimedia support, real-time document sharing, engagement monitoring
- Advanced classroom management: attendance tracking, content moderation, robust analytics
- Seamless integration and accessibility across devices and operating systems
- Dedicated customer support and regular updates
- Testimonials and success stories
